Monitoring & Safeguarding Solutions in Education

Fully Managed Service or Self Managed options available

Securus provides specialist, online safety solutions for schools, multi academy trusts and education establishments to accurately monitor, respond and safeguard the welfare and wellbeing of digital users.

KEY COMPONENTS OF SECURUS DIGITAL MONITORING

The Securus Console

Our intuitive, secure, access anywhere, cloud-based console captures and stores all incidents triggered by words and phrases detected from our library containing 24+ categories of concern.

When an incident is detected a screenshot 'capture' with detailed evidence automatically updates the Securus Console, enabling safeguarding staff to easily review and manage potential risks.

The console also features a management dashboard and reporting suite.

The Monitoring Software

With online & offline monitoring at both the device and network level, our **Securus 360** software monitors all school managed devices & also personal devices connected to the school network. Incidents triggered generate a screenshot 'capture' with full details which instantly updates the Securus Console.

We not only capture keyboard generated incidents. With our unique OCR scanning technology our device level software also captures ANY application generated incidents including Microsoft Teams.
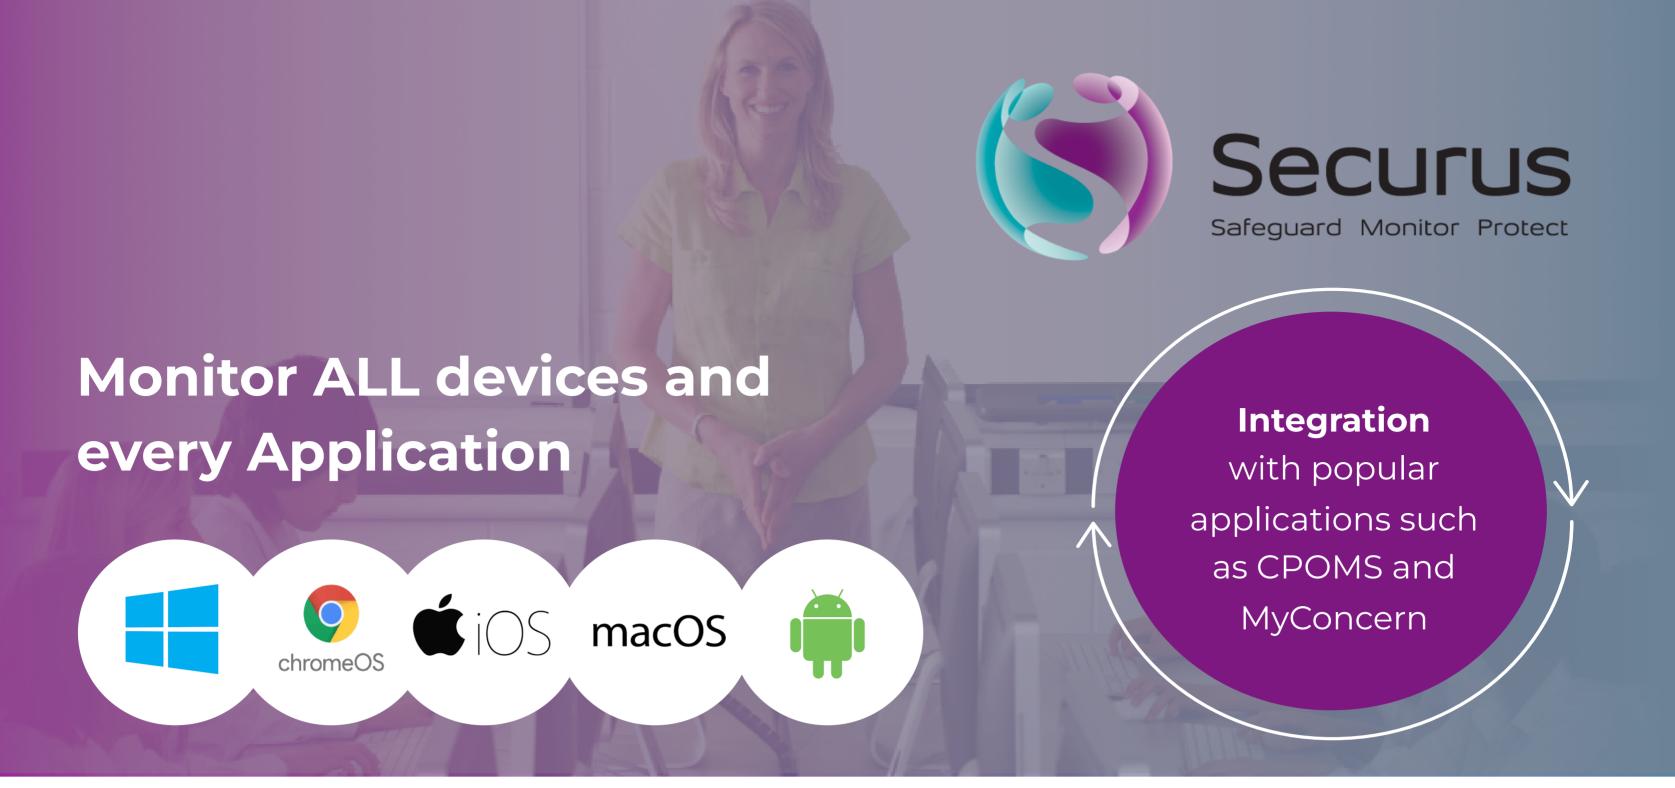

Fully Managed Service or Self Managed

With **Securus 360**, schools have the option to monitor captures themselves using the Securus Console. Or if time constraints and staff resource are stretched, you may wish to leave the monitoring to us.

With **Securus FMS**, our fully managed service, our highly trained safeguarding team will monitor activity on behalf of the school and alert school DSLs, safeguarding, and senior leadership staff to incidents of concern.

Customer Support & Portal

Full access is available to all customers to our dedicated support team and knowledge base portal. Key support features include all software updates plus library updates to reflect both current threats, trends and jargon and our work with industry bodies such as the IWF & CTIRU.
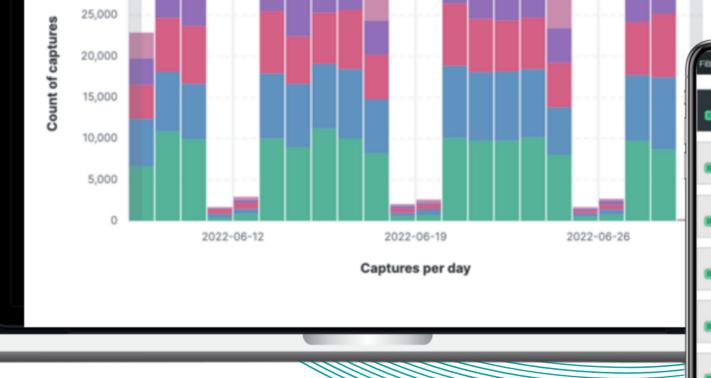

We also provide unlimited online training sessions alongside telephone and email support.

Monitor ALL devices and every Application

Securus meets the statutory guidance standards as set out in Keeping Children Safe in Education, monitoring the full range of technology devices on your school network including MS Windows, Chromebooks, iPads, Androids, mac computers & mobile devices.
